

Powerful, Secure, Self-Contained Learning Management Tool

LMShare™ is a highly flexible learning management tool designed especially for protected and closed environments, remote locations and out-of-network individuals or small learner groups. It provides a mirror image of the parent training environment, extending access to training materials, learning administration tasks and courses, while being highly flexible to the needs of learners. Providing functionality beyond the traditional Sharable Content Object Reference Model (SCORM®) player, the software functions as a standalone child LMS (Learning Management System) enabling users to track progress throughout entire course curriculums. **LMShare** can be used in a variety of settings, including on-site training, Instructor-Led Training (ILT), and individual online learning. Configurable to integrate with any enterprise-class LMS, it decreases availability restrictions, extending your system's eLearning functionality to the entire training population.

The software's user-friendly interface provides instant access to learning content and is fully customizable.

Extends Security & Access to Real Training Environments

Enable off-network users, whether individuals or groups, to continue their learning in completely secure training environments. Administrative access is restricted and access to set-up and configuration tools is completely insulated. When outside the firewall or out-of-network access, individuals can simply transport and access training content on their PCs. Groups of learners can utilize the child LMS network, or self-contained and fully secure local network, to manage training across the group.

For individuals and groups of learners with limited or no Internet access, **LMShare** provides access to courses and curriculums stored on location. Learners simply download the software from a CD. Learning results and history are automatically uploaded when individuals connect to the parent LMS.

Easy to Download & Use

The small (100 MB), downloadable learning management tool contains its own database. Content can be loaded onto individual computers or stored on a content-server. Unlike traditional downloadable SCORM players, **LMShare** enables users to access a number of courses in out-of-network training environments for extended periods of time. Regardless of the number of courses or users, the software can be downloaded from the Web or CD and ready for use.

A fully customizable user interface enables instant implementation. Modifications to the look and feel can be completed and deployed with easy-to-use stylesheets. The user interface is foolproof, tamper-proof and completely secure. Most functions are pre-configured. In larger groups, configuration steps are presented as the software loads, providing immediate availability upon completion of loading.

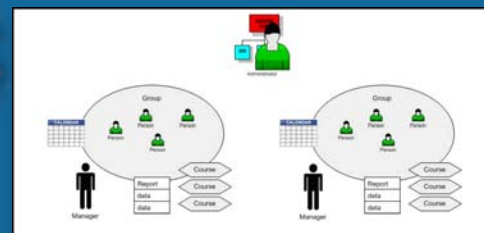

Unique Support for Learning Hierarchy

LMShare supports managed learning configurations for secure networks with three-level hierarchies for administration, department management and individual learners. At the top, a training manager performs basic administrative and learning management tasks, including; content assignment, ILT scheduling and report generation. Training managers can monitor the entire learning population at the site or location. No training is required and every function is supported by an easy-to-follow configuration process. At the next level, group or department managers oversee individual learners in their respective units. Finally, individual learners may have department or group-specific learning plans, including curriculums.

Key Functions

Create Hierarchies to Manage Group Learning

Establish training groups through a three-tier hierarchy to create self-contained secure networks.

Group leaders assign users unique codes, linked to his or her group, for easy training management.

Extend Parent LMS Functions

Provides for learning activities and tasks to fully support Computer Based Training (CBT) and ILT in a closed or isolated environment.

Group leaders securely access curriculum and setup training sessions via helpful wizards.

Generate Built-in Reports

Tracks individual learning history with easy to generate reports.

When working off-network, learning history is stored and then instantaneously uploaded when connected to the parent LMS.

Benefits

- Introduce true LMS functions in a remote or secure area
- Transfer complete learning history to the parent LMS on demand
- Maintain a comprehensive learning program independent of location and network
- Incorporate CBT and ILT for a full learning experience
- Utilize curriculums and prerequisites and obtain interim reports on demand

Accessibility

Secure Access

Allow off-network users secure access to training materials. Supports individual learning. In a closed LAN, classroom or remote area, provides support for content delivery, grade book, reporting, curriculum, CBT, ILT and calendaring.

Internet Independent

Enable users with limited or no Internet connection to access training courses and curriculum.

Small Footprint

Download the 100 MB, economical software package via the Web or from a CD. Clients may choose to package the LMS and content on a CD or DVD for easy distribution. The software is self-loading, fully configured and instantly ready-to-use.

Stand-Alone Content Server

Support extensive usage or large content files with a separate PC in the secure content network. Simply connect and employ, eliminating the memory usage on the learner's platform.

Extended LMS Functionality

Multi-Modal Learning

Support CBT and ILT. Curriculums can also be incorporated into remote learning. Easily schedule ILT sessions and automatically post to each learner's calendar. Learning sequences and pre-requisites can be used as part of a curriculum managed by the software.

One Screen

Display all learning activities and requirements in a single view. Every learning task is just one click away from the main screen. Includes activities such as self-registration to content launch, testing and grading, and reporting.

Built-in Reports

Provide basic reports to training managers and group leaders. One click reports provide instant information on who is enrolled in what courses, how learners are progressing, and which courses are complete.

Integration

Universal Utility

Integrates and is configurable with any enterprise-class parent LMS.

On Demand Integration

Upload all learner data to the parent LMS on demand or without request when the software connects to the parent LMS. Utilizing a secure hierarchy, all learner data is stored on the senior trainer's PC. Only one upload is needed to transfer all learner data.

- 100 MB free space
- Fully operational on any Personal Computer (PC) or Apple® Macintosh
- Java™ 1.5 or higher
- Compatible with Microsoft® Outlook, Apple Safari, Mozilla Firefox®, Opera and other Browsers
- Self-contained database

Maintenance, Technical Support

Upgrades and technical support are provided by Inmedius, Inc. Technical support is available by email and phone 24/7/365.

Generation21 learningsuite

Value Leader in Enterprise Learning Management Systems

A pioneer in eLearning since its inception in 1996, the Generation21 Learning Suite was the first to offer reusable learning objects, performance support technology and true tailored learning. The Suite continues to distinguish itself today with its exceptional product quality, ease of implementation and use, outstanding client service, and in delivering compelling value.

Providing Lifecycle Solutions for Information & Learning Assets Worldwide

Inmedius is a global leader in delivering innovative, performance-oriented applications and services that capture, create, manage and deploy information and learning assets.
